

How to formulate and make chicken feeds for broilers, layers locally in Kenya, the process, Poultry feed ingredients and chicken feed formulation. **Chick mash**, **Grower mash** and the **Layers mash** formulations are made from the same ingredients, they supply carbs, proteins, minerals and additives.

**Maize Germ** is a by product of maize, it is a waste from the maize milling process. It supplies carbohydrates and comes from the maize's hard innermost part.

**Maize Mill** is the real maize that is milled and also supplies carbohydrates (crushed down couple of times to the right size!), this particular one is for making Layers mash where we do not need the maize milled too fine.

**Wheat Bran** is derived from the husk of the wheat grain which are removed when wheat flour is being made, it is very light and supplies carbohydrates.

**Wheat Pollard** is a very fine waste during the making of wheat flour and supplies carbohydrates to the chicken.

These 4 elements (**maize germ, maize milled, wheat bran and pollard**) are the carbohydrates (chicken energy) sources for your feed mill formulations.

Protein is good for the chicken for forming the muscle, tissue and the meat.

**Soyameal** is from soya bean that is processed including defatting or removing fat, remove excess moisture, grind down to size). It supplies protein and can be expensive because of human consumption and availability. It is use in small quantity in the feed.

**Cotton Seed Cake** is derived from cotton seed, pressed to get the cotton oil, we are left with the cotton seed cake to be grinded/milled into what we need like below

**Cotton Seed Cake** isn't used for human consumption and thus easily available and cheap.

**Sunflower Seed Cake** is derived from the sunflower seed that has been grind down and pressed to remove all the sunflower oil needed by humans. The solid cake is usually dried and grind to form the above sunflower seed cake. It is a cheap source of chicken protein.

**Ochongaa** is a mixture small dried tiny fishes from lakes and snail shells, crustaceans, shrimps and insects in small quantities. It is a better-quality protein source and low in price.

Next are the 4 main mineral sources that provide the chicken with good bone and feather formation, scales and beaks. We have the **DCP**, **Cattle Salt**, **Bonemeal** and **Limestone**.

**Limestone** is the raw limestone rock that has been grind down to a powdery form

**Bonemeal** contains broken down/crushed bones, mostly bones from various livestock animals like goats and cows that have been dried to remove the excess oil and fat. It helps the chicken's gizzard to be able to grind down the consumed feed.

It is the usual **Cattle Salt** are given; it is pinkish in color. We do not use the table salt or iodized salt that humans take.

**DCP** is the calcium, it stands for **DiCalciumPhosphate**. It is a whitish powder; we need the feed-grade DCP with chunks to provide grit.

We also have the **4 vitamin sources**

**Premix** is a powder that gives the vitamins for the chicken in commercial feeds.

The chicken needs amino acids to help to break down all the proteins being consumed and absorbed in the body. **Methionine** is a feed grade powder as an amino acid functional additive.

**Lysine** is also a feed grade amino acid functional additive that aids breaking down proteins for body absorption.

These are the 2 **amino acid components**.

**Toxin Binder** helps to destroy most aflatoxins that come from the carbohydrate sources. Toxin binder helps to prevent chickens from mold buildup in your feeds.

**Coccidiostat** is a whitish powder that helps birds below 4.5 months from getting coccidiosis disease. You need to put this in the feed to prevent the chicken from getting coccidiosis easily and reduce the incidences and reduce mortality.

We now need to know how much of each element to put in any specific feed formulation you are making like **chicks mash, growers mash or layers mash?**

# HOMERANGE POULTRY FARM

A Heritage of Quality in KARI Improved Kienyeji Chicken Farming

Day Old Chicks

High Quality Chicken Feed

Training on Poultry Farming

## PROFITABLE POULTRY FARMING COMPREHENSIVE TRAINING

### HOMEFEEDS CHICKEN FEED

HOMEFEEDS Poultry Feeds are specially formulated for the Improved Kienyeji chicken breeds. Our feeds are the only feeds in the market that have been specifically formulated to meet the nutritional requirements of Improved Kienyeji Chicken breeds ( KARI Improved Kienyeji chicken, Kuroiler, Rainbow Rooster, Sasso, Kenbro ).

Formulated from the highest quality ingredients sourced from a diverse chain of suppliers, our feeds are nutritionally balanced to **guarantee fast growth and development of your improved kienyeji chicken**, start of lay from eighteen (18) weeks of age, coupled with optimum egg production from your hens during their productive egg laying period.

The feeds formulated for our breeder flock at our poultry farms remains the same high quality feeds that is packaged and distributed as HOMEFEEDS for our customers. As a quality control measure, all batches of feed produced are tested on a controlled flock of chicken at our production center to be able to assess quality and continue to make improvements with the aim of delivering the highest quality feeds in Kenya specially formulated for the improved kienyeji chicken.

HOMEFEEDS guarantees the improved kienyeji chicken farmer a nutritionally balanced formulation that ensures your kienyeji chicken get the required nutritional needs during various stages of their growth and development.

### HOW TO PURCHASE

HOMEFEEDS poultry feeds is available on walk-in cash-and-carry basis from our offices and poultry farm. Please pay us a visit during our working hours to make your purchase.

### ALL FEEDS ARE AVAILABLE AT THE FOLLOWING OUTLETS:-

- OUR POULTRY FARM at MUCHATHA TOWN along Banana Raini road (Kiambu County), off Ruaka town (Limuru road)
- Homerange Depot and Aggregation, Emali town, along Wote Road, Opposite ACK St. Peters Academy - Email.

For further enquiry please Call / SMS / Whatsapp our customer care team on 0727 200 116.

## Homefeeds Chick Mash

Our Homefeeds Chick Mash is of the highest quality and comes specially formulated to ensure healthy growth of your kienyeji chicks. It is fortified with high levels of vitamins, minerals and amino acids required for optimum growth and development of chicks. Our Homefeeds chick mash also contains coccidiostat and key nutritional elements that boost the ability of the chicks to manage common chick diseases.

50Kg - Kshs. 3,000/=

20Kg - Kshs. 1,220/=

5Kg - Kshs. 335/=

## Homefeeds Growers Mash

Our Homefeeds Growers Mash is of the highest quality and comes specially formulated to ensure healthy growth of your kienyeji chicken. It is fortified with high levels of vitamins, minerals and amino acids required for optimum growth and development. Our Homefeeds Growers Mash contains coccidiostat and key nutritional elements to boost the ability of your pullets to manage common diseases.

50Kg - Kshs. 2,850/=

20Kg - Kshs. 1,150/=

5Kg - Kshs. 310/=

## Homefeeds Layers Mash

Our Homefeeds Layers Mash is of the highest quality and comes specially formulated with a balance of mineral elements to ensure optimum egg production, high quality eggs with a hard shell and large size. The feed has been fortified with vitamins and amino acids to ensure your laying chicken maintains optimum health during their period of lay, while attaining optimum egg production.

50Kg - Kshs. 2,900/=

20Kg - Kshs. 1,170/=

5Kg - Kshs. 320/=

#### DAY OLD CHICKS (KARI IMPROVED KIENYEJI CHICKEN BREED)

Our Kari Improved Kienyeji Day Old Chicks are of high quality and come **fully vaccinated against Mareks disease**.

Mareks is a disease that causes a paralysis of wings and limbs in your chicken from when they attain age of 18 weeks and above. The disease causes heavy losses as the birds easily succumb to the disease and most times do not recover from it, resulting in losses to farmers who have already invested a lot in the chicken to get it to maturity age.

We also hold the chicks for an additional 24 hours (1 day) to ensure that they acclimatize and that none reacts adversely to the mareks vaccine.

We maintain our own breeder parent stock that provides us with high quality fertilized eggs for incubation. In so doing, we give a guarantee to our customers that the product we sell them is of high quality and from a well bred, well managed, healthy parent stock.

We also apply numerous quality control measures that ensure that the product we provide to our valued customers meets the standards. These quality control measures include optimum egg weight check, optimum shell quality check and much much more.

We sell our day old chicks in a **cock to hen ratio of 1:1** hence guaranteeing that our valued customers are able to get the highest percentage of fertile eggs from their stock.

We go a step further by providing the customer with **specialty formulated chick mash fully fortified with vitamins and a host of amino acids to feed to their chicks** from day old to ensure their internal organs develop properly and they get a great start to life!

#### FUGA PACKAGES (CHICKS + FEEDS):

**All orders for chicks come bundled with our High quality Homefeeds Chick mash** to ensure that the customer not only gets high quality chicks but equally high quality feeds that ensure high survival rate, low mortality and fast growth within the first month of the chicks life!

Our customer have a host of choice when it comes to the **FUGA package** they wish to purchase. The day old chicks and feeds packages available are as follows (See on the right).

#### HOW TO PLACE AN ORDER:

To place an order for any of the FUGA PACKAGES ( DAY OLD CHICKS + CHICK MASH ), send an SMS with the word CHICKS to 0727200116. Our automated order placement system will then guide you on selecting the package that you want. Once you have selected a package, proceed to remit the 25% order deposit required via our MPESA payroll provided.

Upon receipt of your deposit, you will be added onto the ORDER STATUS WHATSAPP group that will enable you keep track of your order and an update of the collection date.

A week prior to collection, an SMS notification will be dispatched to you to alert you on the exact collection date.

#### ORDER WAITING PERIOD:

Please allow a period of 3 - 6 weeks for your order to be ready. Order collections by customers are done WEEKLY from OUR HOMERANGE POULTRY FARM AT RUAKA town along Banana Raini road (Kiambu County), off Limuru road.

For any further enquiries / clarification please contact our Customer Care on Call: 0855 WhatsApp: 0727 200 116

#### How to Place an Order:

To place an order for any of the packages above, sms the word 'CHICKS' to 0727 200 116 then remit your 25% deposit payment as per the instructions provided via SMS then forward the bank payment confirmation message to 0727 200 116. Your order will then be entered onto our Order List and an SMS confirming the same will be dispatched to you. Thank you!

#### TRAINING & CAPACITY BUILDING:

We provide expert training to beginner poultry farmers, individual member of the public, Governmental and Non-Governmental Organisations (NGOs), self-help groups, CHAMAS, saccos and other institutional parties on various best practices that need to be applied in any poultry farming project in order to achieve success and profitability through optimization of poultry flock production, minimisation of production costs and maximisation of return-on-investment.

In light of global warming and the impact of climate change in poultry production, our training focusses on eco-efficient technologies and methodologies applicable in chicken farming in order to ensure its conducted in a sustainable and environmental friendly way. These production technologies ensure the use of drought-resistant drops as substitute to some of the feedstuff used in chicken feed production.

In the past eleven (11) years, our training has directly benefited over 50,000 individuals who were either previously engaged in or started their poultry farming projects after attending our training. In so doing, we have made a direct contribution towards job creation for youth, women and other vulnerable groups and contributed directly towards growth of the Kenyan livestock production sector.

Our training covers both an in-depth theory and a practical approach where participants of the training get a chance to visit our poultry farm for purposes of conceptualising and learning practically how all the best practices in poultry production that they learnt during the theory part is actually applied at the poultry farm.

We offer different types of training programs to suit the diverse needs of people interested in venturing into chicken farming and generally poultry production.

Further, our training is comprehensive and focusses on the entire poultry value chain from its production, processing and consumption (marketing). This approach ensures the individual is equipped with knowledge on how to manage their poultry venture end-to-end in an efficient manner.

**Online Poultry Training Program**

**CLICK HERE**

**2,500/=**

Access over 10 hours of poultry training content hosted on **FACEBOOK GROUPS**. Learn at your own pace and enjoy **UNLIMITED** access to the training content.

**Hands-on Farm Training**

**CLICK HERE**

**Charges:**  
**4,500/=**

Physically visit our poultry farm & attend a comprehensive training with a practical approach that allows you unlimited access to **our poultry farm at Ruaka Town**.

#### POULTRY HOUSE DESIGN & BILL OF QUANTITIES (BQS):

We offer poultry house design ( chicken coop design ) and a list of all the construction materials you need ( Bill of Quantities). This will enable you build the ideal house for your chicken. This material will also help you know the full cost of the poultry house that you wish to setup for your flock.

Our poultry house design is of the raised floor poultry house design which is ideal for poultry as it ensures proper bio-safety standards are maintained. This results from ensuring that the birds do not stay in their chicken droppings and that these droppings drop down to a different level where they can be collected easily.

The poultry house design is such that half the flock stay on the top floor and the other half on the bottom floor. Thus, if say a house design is for 300 birds, the design is such that 150 birds stay on the top floor and 150 birds on the bottom floor.

Get detailed 3D raised floor chicken house plans (with all dimensions) and a Bill of Quantity (Outlining all the required building materials) and the TOTAL COST OF CONSTRUCTION!

The design and BQs are sent to you via EMAIL or WHATSAPP in PDF format to allow you to print the same for your records.

#### APPLICABLE COSTS TO GET THE DESIGN & BQs:

100 bird Poultry House Design & BQs - Kshs. 1,500

200 bird Poultry House Design & BQs - Kshs. 2,000

300 bird Poultry House Design & BQs - Kshs. 2,000

500 bird Poultry House Design & BQs - Kshs. 2,500

1000 bird Poultry House Design & BQs - Kshs. 2,500

2000 bird Poultry House Design & BQs - Kshs. 5,000

5000 bird Poultry House Design & BQs - Kshs. 10,000

Once payment for the designs and BQs is made, please allow atleast 24 hours for your request to be processed and sent to you via email or whatsapp.

#### HOW TO REQUEST FOR THE DESIGNS AND BQs:

SMS the word **HOUSE** to 0727 200 116 then select your preferred poultry house size.

For any further enquiries / clarification please contact our Customer Care on Call / SMS / Whatsapp 0727 200 116.

## POULTRY HOUSE PLANS & BQs

#### LISHA KUKU LIPA POLEPOLE PROGRAMME

##### PHASE VIII (PHASE EIGHT)

##### REGISTRATION OPEN NOW!!

##### REGISTRATION DEADLINE: 31ST NOVEMBER 2022

Our LISHA KUKU LIPA POLEPOLE Programme (LKLP) aims to assist you to improve your income from kienyeji chicken farming while at the same time you are assisting us in meeting the current high market demand for quality and reliable supply for kienyeji chicken.

##### LOWER COST OF PRODUCTION FOR YOUR CHICKEN

Of major concern to you as a poultry farmer is the current high cost of chicken production in Kenya that is caused by the prevailing high retail prices of poultry feeds and agri-inputs such as chicks and agrochemicals. Our LKLP programme is geared towards helping you cut down this high cost drastically by **availing high quality farming inputs i.e. day old chicks and poultry feeds at affordable prices.** This is aimed at enabling you to lower the cost of producing your kienyeji chicken as compared to if you had opted to make purchase of the inputs as per the prevailing market retail prices.

By ensuring that your cost of production for your kienyeji chicken is significantly lower, this opens a wide avenue for you to make a higher profit once you sell your kienyeji chicken for meat and eggs at the prevailing market prices.

##### READY MARKET AT MATURITY OF CHICKEN

Another key challenge for YOU as a poultry farmer in Kenya is accessing ready market once your chicken gets to maturity. Our LKLP program seeks to address this by aggregating kienyeji chicken for meat produced by you and other members of the program then we use our wide market network to sell and distribute the chicken to the market. Thus, you as a farmer receive guaranteed sale of your kienyeji chicken without the need to do the legwork of moving from outlet to outlet looking for a customer. This ensures that you concentrate on ensuring production of quality kienyeji chicken as per the standards we provide during our comprehensive training, and we focus on marketing your final produce.

##### ACCESS TO QUALITY & AFFORDABLE FEEDS

Access to quality and affordable poultry feed remains a major challenge to all poultry farmers in Kenya. To address this we produce and supply you directly with high quality feeds on a monthly basis. These feeds have been specially formulated to meet the nutritional requirements for the KARI Improved Kienyeji chicken breed.

##### SUPPORT AND ADVICE DURING THE PRODUCTION PERIOD

We also provide you with FREE advice and support during the chicken production period to ensure that any challenges that you encounter are addressed promptly to eliminate cases of chicken deaths / mortality.

##### ACCESS TO HIGH QUALITY DAY OLD CHICKS

Under the LKLP programme, We will also provide you with high quality KARI Improved Kienyeji chicks produced at our hatchery to guarantee you quality. These shall be supplied at a subsidized price lower than the usual retail price. This is to further enable you reduce your cost of production and consequently widen your profit margin upon sale of your mature chicken.

**JOIN THIS PROGRAMME NOW!! REGISTRATION OPEN FOR A LIMITED TIME ONLY.**

REGISTRATION OPEN NOW!!

## LISHA KUKU LIPA POLEPOLE PROGRAMME

#### Become a member today and enjoy:

- Ready market through Buy-back of your chicken at maturity (5 Months).
- Access to High quality KARI Improved Kienyeji Day old chicks & Poultry Feeds.
- Beginner Comprehensive Training on Poultry Production Standards.
- Support and advice during the chicken production period.
- Flexible Monthly Instalment Payments for the feeds and chicks.

**50 PACKAGE**

**50 Day Old Chicks**  
80Kg Chick Mash  
212Kg Growers Mash  
57Kg Layers Mash

Monthly Instalment for 5 Months:  
Kshs. 4,716/-

Total Profit Realised for the full production period:  
Kshs. 120,835/-

**100 PACKAGE**

**100 Day Old Chicks**  
160Kg Chick Mash  
425Kg Growers Mash  
115Kg Layers Mash

Monthly Instalment for 5 Months:  
Kshs. 9,431/-

Total Profit Realised for the full production period:  
Kshs. 241,670/-

**200 PACKAGE**

**200 Day Old Chicks**  
320Kg Chick Mash  
850Kg Growers Mash  
230Kg Layers Mash

Monthly Instalment for 5 Months:  
Kshs. 18,862/-

Total Profit Realised for the full production period:  
Kshs. 483,340/-

**OTHER PACKAGES AVAILABLE**

To find a package that suits your monthly budget, please click on **PACKAGES AVAILABLE** above and see our range of available packages from 50 chicks to 1000 chicks

**NOTE: FULL PRODUCTION PERIOD IS FROM 1 DAY - 17 MONTHS age of chicken.**

#### HOW TO REGISTER

**TO REGISTER,** Please download the **LKLP MEMBERSHIP REGISTRATION FORM** available on our website. **FILL THE FORM and RETURN** it to us via email to [homerangepoultrykenya@gmail.com](mailto:homerangepoultrykenya@gmail.com)

## WHO WE ARE

### [ A Heritage of Quality in KARI Improved Kienyeji Chicken ]

**Established in March 2012**, Homerange Poultry Kenya (HPK) is a company that specializes in the distribution of the KARI Improved kienyeji chicken.

From the humble beginnings of being a farm that housed only fifty chicken, we have grown to be a household name in the sale and distribution of quality KARI Improved kienyeji chicken.

We specialise in the sale of kari improved kienyeji day old chicks (DOC) and month old chicks (MOC), all of which have been expertly bred and managed to ensure the end product is a high quality mature kienyeji chicken that delivers high nutrition to consumers in the safest form possible.

### ABOUT OUR BREED (THE KARI IMPROVED KIENYEJI CHICKEN)

The KARI Improved kienyeji chicken is an indigenous poultry breed researched on and developed by the former **Kenya Agricultural Research Institute (KARI) (Now, Kenya Agricultural and Livestock Research Organisation - KALRO)**. It's a breed that took a decade (10 years) to breed and perfect, having commenced research in 2002, before officially launching it into the market in 2012.

The breed was originally released under the brand name of KARI Kienyeji Chicken, but was revised later to be officially known both locally and internationally as **The KARI Improved Kienyeji Chicken**. This was in order to emphasize the fact that this breed was purely a local indigenous chicken that is **100% kienyeji** and that has retained all the characteristics of the ordinary village kienyeji chicken, albeit with **now higher production of eggs, lowest feed consumption** (hence lower cost of production) and **faster maturity period** (Only 4.5 months).

### HIGHER EGG PRODUCTION

The KARI Improved Kienyeji Chicken has much higher production in terms of eggs compared to the ordinary kienyeji chicken and hence why its called 'improved'!

With an average egg production of 25 eggs per hen per month (or 300 eggs annually) , it's production also outmatches all other 'improved kienyeji breeds' i.e. Kuroiler (150 - 200 eggs annually or 12-16 eggs per hen per month), Rainbow Rooster (160 - 180 eggs annually or 13 - 15 eggs per hen per month) or Kenbro ( 150 eggs annually or 13 eggs per hen per month).

This high egg production aspect is what makes the KARI Improved kienyeji chicken reign supreme over all other 'improved kienyeji chicken' breeds and why its unmistakably the most profitable breed to keep.

### OUR VISION

*To be a regional leader in the sale and distribution of indigenous kienyeji chicken, fostering socio-economic growth and prosperity of the people of East Africa and the whole of Africa as a whole.*

### OUR MISSION

*To be the leader in the indigenous chicken value chain in Kenya and have our brand synonymous with the word 'Kienyeji chicken'.*

*'Usiseme kienyeji, sema Homerange!'* (Don't just say indigenous chicken .....say 'Homerange')
