

HOW TO SETUP A POULTRY FARM BUSINESS

How to setup a poultry farm, as an agri-preneur with a niche in poultry farm there are a lot of things you need to know and understand about how to setup a poultry farm, which of this group do you belong to?

1. You are a beginner in poultry farm business
2. Some time ago, you bought a few birds to rear, but most of them died.
3. Thirdly, you are looking for a profitable agro-business venture to invest in.

Poultry farm business is a very lucrative agribusiness, I must say but there are some conditions you have to meet before you can break even in your poultry farm and a well-detailed business plan will do you a whole lot of good.

Poultry farming refers to the raising of various types of domestic birds commercially for the purpose of producing meat, eggs, and feathers. Poultry farming is a very profitable agribusiness. But you need to know how to manage a poultry farm very well to succeed in this business.

Ventilation needs to be accounted for in your pen, use net to allow ventilation too

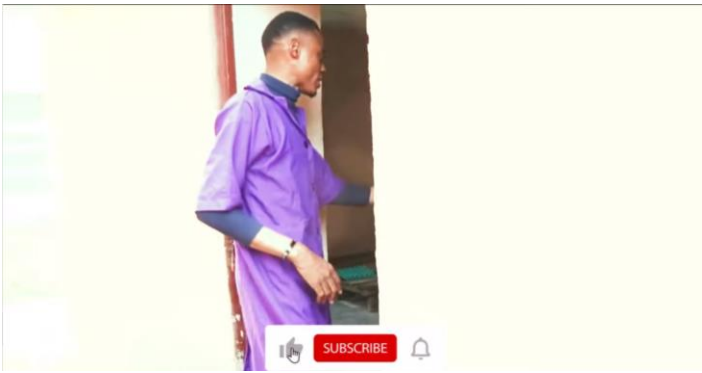

This is our administrative office

Here are our staff quarters on ground full-time to tend to the chickens 24/7. You also need them to adhere to the consistent times for feeding your birds like 6am, 12noon and 4pm and application of drugs when needed.

This is for four staff members (farm security staff, chicken pen staff, maintenance staff), it includes a sleeping quarter, kitchen and bathroom.

This is our well-ventilated egg storage facility where we keep our eggs before sale for up to 2 weeks.

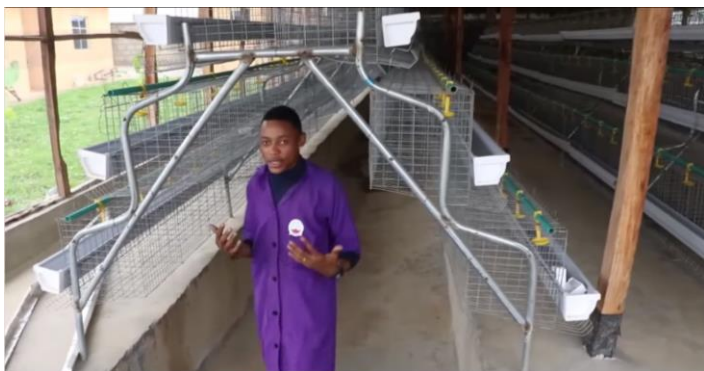

Ensure you have a sales point where nobody can enter your storage facility with disease.

We have planted tree plants here to create a cool shade and cool ventilation for the pen when fully grown

We will be collecting all the chicken droplets for drying and washing down the waste area every 3 days for disease control. Each of our battery cages will take 1,500 layers.

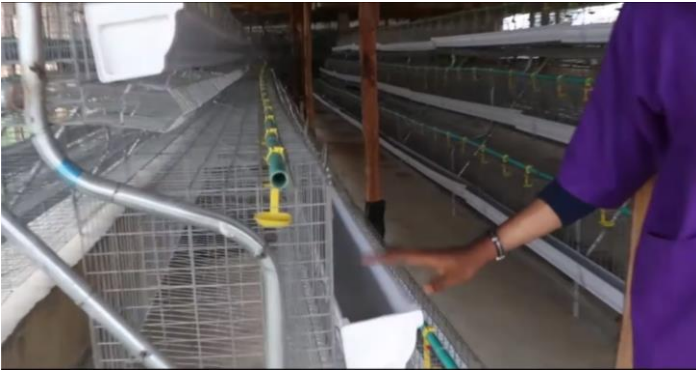

We will have a 1,500 liters tank up here to constantly supply water to the birds when operational.

You need proper lighting system to enable your birds eat at night. You need to have a **feeding calendar** like 6am, 12noon and 6pm, then let the food digest and egg produced at night.

This GP tank will allow us have constant water in the farm facility.

This is the farm manager's apartment.

We also have a fish hatchery facility where we will raise and grow out our fishes in big tanks

We will use solar panels to reduce electricity costs

Plant flower trees for shade around your poultry farm. Also make sure you have concrete floors that can be washed for disease control

We also have a generator and solar room

Next, we see our breeding room for boilers that need to spend at least 2 weeks there when bought to grow and get drugs to boost their immune system. The lights give heat and see around.

We also charcoal pots for heat generation for the broilers.

Next is the abbatoir where we will kill and process our chickens to be sold as frozen food.

Next is our storage room where we will be storing our feed bags, medicine, sprayer, and other things.

Here is our 3,000-broiler room that is being built up.

You need a cat on your farm to help chase off rats that disturb your beds and eat your feeds.

These are our earthen ponds for raising feed, we have banana trees to provide habitat

We are also building an isolation center to treat, nurture, care for sick birds before returning them back to the battery

This is going to be our broiler room also.

In setting up and running your farm, you need to have your **People strategy**, your **Financial strategy**, your **Management strategy**, your **Farm Setup/Preparation strategy** and your **Operational strategy**.
