

This video shows how to make high quality chicken feeds with different raw materials and mixing with very simple homemade Manual mixer. This is my chicken feed mixer with crushed maize as the main chicken feed component.

Premixed concentrate that has all the important nutrients in specific quantities.

Remove the inlet tray and close the mixer drum inlet opening. We can now start the mixing process by turning the drum in both directions over several minutes.

Next, we open the inlet tray and pour out the mixed chicken feed.
